

SANIDHYA SAHU

Cloud Security & SOC Analyst | Cloud Threat Detection | Incident Response

8871383344 | sanidhyasahu782@gmail.com | LinkedIn | Bangalore, India

PROFESSIONAL SUMMARY

CompTIA Security+ and EC-Council Certified SOC Analyst (CSA) certified analyst with hands-on SIEM monitoring, alert triage, and MITRE ATT&CK-based investigation experience across 100+ lab and enterprise-style simulations. Working knowledge of Microsoft Entra ID identity risk reviews, and currently building multi-cloud security depth across AWS and Azure through structured INE training, with practical exposure to CloudTrail and Microsoft Defender for Cloud. Comfortable in Windows environments, TCP/IP networking, and Python/PowerShell scripting for security automation.

EXPERIENCE

Cybersecurity Researcher/Mentor | Red Team Hacker Academy, Bangalore

Nov 2025 – Present

- Triageed 100+ security alerts across Splunk, Microsoft Sentinel, and Wazuh sorting true positives from noise and escalating real threats through structured IR playbooks.
- Traced attacker footprints through firewall, DNS, HTTP, and Windows logs, mapping behavior to MITRE ATT&CK techniques (T1078, T1484, T1566, T1486) and pulling context from VirusTotal and Shodan.
- Set up a Splunk environment and ran a brute-force login attack against a test machine, then pulled the Windows and network logs to break down exactly what each attack stage looked like from the log side.
- Built a Wazuh + ELK detection lab from the ground up on VMware, getting it lives on a Windows endpoint and debugging severity-12 alert failures through PowerShell.
- Practiced cloud security and CSPM fundamentals hands-on through INE labs, alongside vulnerability triage using Nessus.

PROJECTS

Threat Intelligence Automation Pipeline — Python · Flask · VirusTotal API · Shodan · MITRE ATT&CK

- Built an automated IOC enrichment pipeline for IPs, domains, and file hashes, replicating SOC threat intel workflows to cut manual analyst lookup time and improve alert context.
- Integrated MITRE ATT&CK technique mapping and a Flask dashboard generating structured threat severity reports, supporting triage and investigation logic similar to SOAR playbooks.

Cybersecurity Home Lab | VirtualBox, Active Directory, Snort, pfSense

- Simulated a multi-layer security environment with 10+ VMs replicating Active Directory, SIEM, Firewall, and IDS, enabling practical testing of attacks and defenses.
- Monitored and analyzed security events in Wireshark (packet capture) and Splunk (log data) to detect anomalies to detect anomalies and analyze incident patterns in forensic investigations.
- Discovered and exploited 15+ system vulnerabilities using Metasploit, Nmap, and manual techniques, strengthening defensive countermeasures and understanding common attack paths.

TECHNICAL SKILLS

- **Cloud Security (AWS & Azure):** CloudTrail, IAM, AWS Config · Microsoft Defender for Cloud, Microsoft Sentinel, Azure Monitor in progress via INE
- **SIEM & Monitoring:** Splunk, Microsoft Sentinel, Wazuh, Elastic SIEM, Log Analysis, Alert Triage
- **Identity, Endpoint & Network:** Microsoft Entra ID / Azure AD, CrowdStrike Falcon (EDR concepts), Microsoft Defender XDR, Wireshark, Nmap, Nessus, Burp Suite, IDS/IPS, TCP/IP, DNS, VPN
- **Threat Intelligence & Frameworks:** MITRE ATT&CK, Cyber Kill Chain, IOC Enrichment, VirusTotal, Shodan, MISP, AlienVault OTX, IR Playbooks
- **Scripting & Automation:** Python, PowerShell, Bash
- **Governance & Compliance:** SLA/SOP adherence, Incident documentation, Audit evidence gathering.

CERTIFICATIONS

- **CompTIA Security+** — Feb 2026
- **EC-Council Certified SOC Analyst (CSA)** — July 2026
- **Red Team Hacker Academy – CICS**A — May 2026
- **TryHackMe** – 100+ SOC & Blue Team Rooms Completed — Ongoing

EDUCATION

B.Tech, Computer Science — Lovely Professional University

Graduated 2025
